

Spine-fold Spinosaurus

Spinosaurus were very large and you may wish to enlarge this sheet onto A3 card on a colour photocopier.

Use a small screwdriver or scissor blade to score the dotted lines.

Cut off the two sides of the spine 'sail' and the spacer and keep safe.

Fold the spinosaur in half and cut out (both sides at the same time).

Glue the sides of the head and tail together but NOT the legs and arms.

Fold the arms at the 'elbow' and 'wrist'.

Glue the sides of the 'sail' together but leave the base free of glue.

Fold out the bottom sides of the 'sail' slightly and glue to each side of the spinosaur's spine (just below the dotted line).

Fold (inward) the feet extensions (needed to make it stand).

Glue the feet extensions to the base where indicated.
